USING YOUR SPREADER:
Settings are made by pressing down on the Calibration Indicator button and setting to the desired number on the Control Cable Assembly (See Photo).
TO OPEN SLIDE PLATE: Push the Control Lever forward until it stops against the button.
TO CLOSE SLIDE PLATE: Pull the Control Lever fully back toward yourself.

MAINTENANCE INSTRUCTIONS:
AFTER EACH USE: Wash unit thoroughly and let dry.

CAUTION: Care must be taken with any weed killer, pesticide or combination product. They can be harmful to other plant life in the yard.

TIPS:
* Always follow directions indicated on this instruction sheet.
* Never apply a lawn care product by hand.
* Walk at a steady pace to ensure even application throughout the lawn. The faster you walk, the thinner the coverage.
* To avoid gaps and streaks, first spread the border of lawn and then fill in center with uniform parallel passes.
* For best results, apply in two passes, using a crisscross pattern and 1/2 of setting number given below.
* All fertilizers should be watered in after application.
* In case of accidental over application, increase watering.

General Instructions for properly setting your Spreader
1. Use the settings under “Standard Settings” Section for most applications by figuring lbs. per 1000 square feet.
2. These numbers are for a one pass application.
3. A two pass application is recommended, using a crisscross pattern. If using this method, use half the setting number given.
4. There are too many variables involved with setting any spreader to perfectly grade the settings. Differences will exist between fertilizers, even if they are the same brand and type.
5. If you think too much is being applied, cut down your setting.
6. Close Spreader at the end of each pass. Open again at the start of your next pass.
7. Gravity and motion are critical forces influencing the Spreader. The faster you walk, the thinner the coverage.

Spread Diagram

How To Measure Lawn Application Total

CALCULATING POUNDS PER 1,000 SQUARE FEET
To calculate how many pounds of fertilizer to put down, you first need to read on the fertilizer bag how many square feet the fertilizer will cover. For example: you have purchased a bag of fertilizer that states it will cover 15,000 square feet, and weighs 46.56 pounds. To figure coverage simply divide the bag weight by the suggested coverage to get how many pounds per square feet. This example would be 46.56 / 15,000 = .003104 pounds per square feet. To convert up to 1,000 square feet simply multiply .003104 by 1,000 to equal 3.104 pounds. CAUTION: These settings are intended for reference only. As there are many variables involved with setting any spreader; including physical composition of the material being applied, walking speed and terrain; settings may have to be adjusted. Because of these conditions, Precision Products, Inc. makes no warranty as to the uniformity of coverage actually obtained from the settings listed.

The following settings can be used to apply products not found in the application chart. These are general information settings intended to be used as references.
